

# Expression Document of G-Stock

**Goal/Objective:** Implement G-Stock Receive, G-Stock Position menu in TechDiser

**Technology and Tools:** AngularJS, Javascript, HTML, CSS

**Tasks and Sub-Goals:**

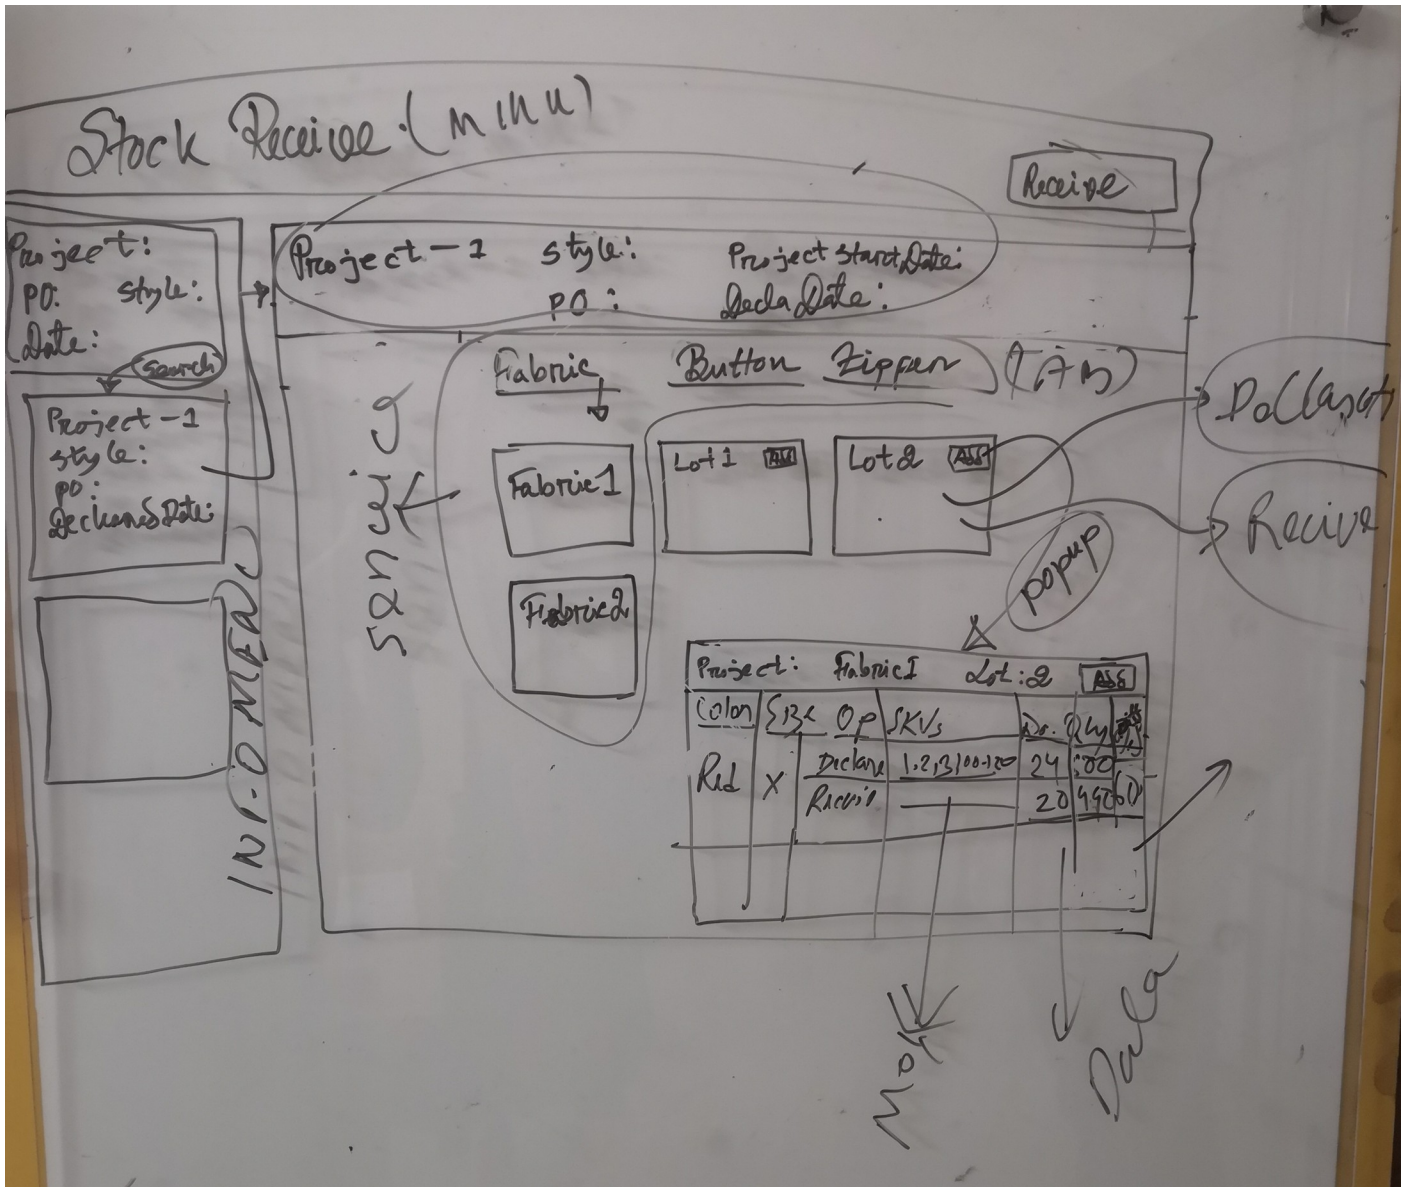

SN	Tasks	Sub-Goals	Section
1.	<ol style="list-style-type: none"><li>1. Projectlist Info Menu</li><li>2. Projectlist Filter</li><li>3. StockReceive workspace for specific project</li><li>4. Fetch material list from service</li><li>5. Matrial list Tab</li><li>6. Add lot popup</li></ol>	Stock Receive menu	Section 1
2.	<ol style="list-style-type: none"><li>1. Projectlist Info Menu</li><li>2. Projectlist Filter</li><li>3. StockDeclaration workspace for specific project</li><li>4. Fetch material list from service</li><li>5. Matrial list Tab</li><li>6. SKU declare popup</li><li>7. Display recived info parrent card</li><li>8. display declared info child card</li></ol>	SKU declaration menu	Section 2
3.	<ol style="list-style-type: none"><li>1. Projectlist Info Menu</li><li>2. Projectlist Filter</li><li>3. material info menu</li><li>4. Stock Position workspace for specific project and specific material</li><li>5. Select container popup</li><li>6. container collapsible list</li><li>7. cubicle list parent card</li><li>8. allotted SKUs child card</li></ol>	Stock position menu	Section 3

	<div>9. Dropdown list (material , container)</div> <div>10. Color size wise info menu</div> <div>11. BoxSize wise parent card</div> <div>12. allotted stock child card</div>		
--	--	--	--

## Section 1 – Stock receive menu

### 1.1 UI Flow

#### 1.1.1 Stock receive UI

## **1.1.2 UI Routing Component**

1. info Tab – material tab
2. Info Menu – project list
3. popup- Add lot popup

## **1.1.3 Workspace Component**

1. card- project filter, project list, material type (parent card) , lot (child card)
2. header- project info
3. Table- add lot

## 1.2 Expression Table

SN	Title	Content
1.	External Dependencies	G-stock declare data, Material info service
2.	Business Constraints	
3.	Technical Constraints	
4.	Functions	
5.	Findings	Quantity definition
6.	Unexplored Issue	Filter, work with several data set, Flat data structure, SKU expression, get material list from service
7.	Deliverable	Prepare receive json for SKU declaration menu

## 1.3 Data Structure

### 1.3.1 Final Data Structure

#### Mock Data

```
1  {
2    "data": [
3      {
4        "TECHDISER_ID": "order1project1",
5        "project": "project-1",
6        "projectId": "project1",
7        "poId": "order1",
8        "styleNo": "SN02",
9        "projectCompletionDate": "2020-10-10",
10       "sentToGstockDate": "2020-10-11",
11       "materials": [
12         {
13           "TECHDISER_ID": "order1project1febricfebric1lot1color1size1",

  ]
}
```

### 1.3.2 Derivation:

## 1.4 Operation Flow

## 1.5 Technical Workout

View	Component	Data Fetch	Prepare View Data	Event	Data Save
Stock Receive (Landing Page)	Left Info Menu Project filter project list	*GetGstock ProjectList()	PrepareProjectList InfoMenu()	1.Search 2.select project card 5. receive	
	1.search		Prepare filtered project list()		
	2.Stock receive workspace for specific project	Get project specific material list() from Inquiry data service	Prepare material type for tab view()	3.select tab	
	3. Material wise lot view card (declared vs receive)	Filter for specific material	Prepare material wise lot info()	4.add	
	5. receive		Prepare receive json save data()		G-Stock receive
4. Add lot popup	Table declared vs receive, quantity	Get previously received lot from received json() *getQuatityDef()	Prepare specific lot view()	6.add	*Temporary data preserve

## Section 2 – SKU Declaration

### 2.1 UI Flow

#### 2.1.1 SKU Declaration UI flow

Getstock SKU Declaration Save

Project Filter  
Project Filter Menu

Project Info Bundle

Fabric Button Zipper Thread

Fabric1 Lot 1 Declared Received vs stock

Fabric2

popup

Project: Fabric1 Lot 1		10/10/2018	
Color:	Size:	Measurement, Weight, Puffs	
		Received	Declared
		SKU # Qty	SKU # Qty
		M M 60 100	50 50
		100 100	50 50

SKU Declaration popup

Project: Fabric: Lot 1 ASS

Color: Red	SKU Prefix: ABC	SKU Prefix: abc
Size: X1	Box Size: 3x3x3	Box Size: 3x3x3
SKU: 1-10	quantity/sku: 50	quantity/sku: 10
Item/sku: 100	SKU: 20-19	SKU: 10-19
Total Items: 1000	quantity: 500	quantity: 500
Balance: 50	<span>ASS</span>	<span>ASS</span>

Color: Green

Balance = Total Quantity -  $\sum Q$

## **2.1.2 UI Routing Component**

1. info Tab – material tab
2. Info Menu – project list
3. popup- SKU declaration popup

## **2.1.3 Workspace Component**

1. card- project filter, project list, material type, color size wise parent card, SKU declaration child card, material type (parent card) , lot (child card)
2. header- project info

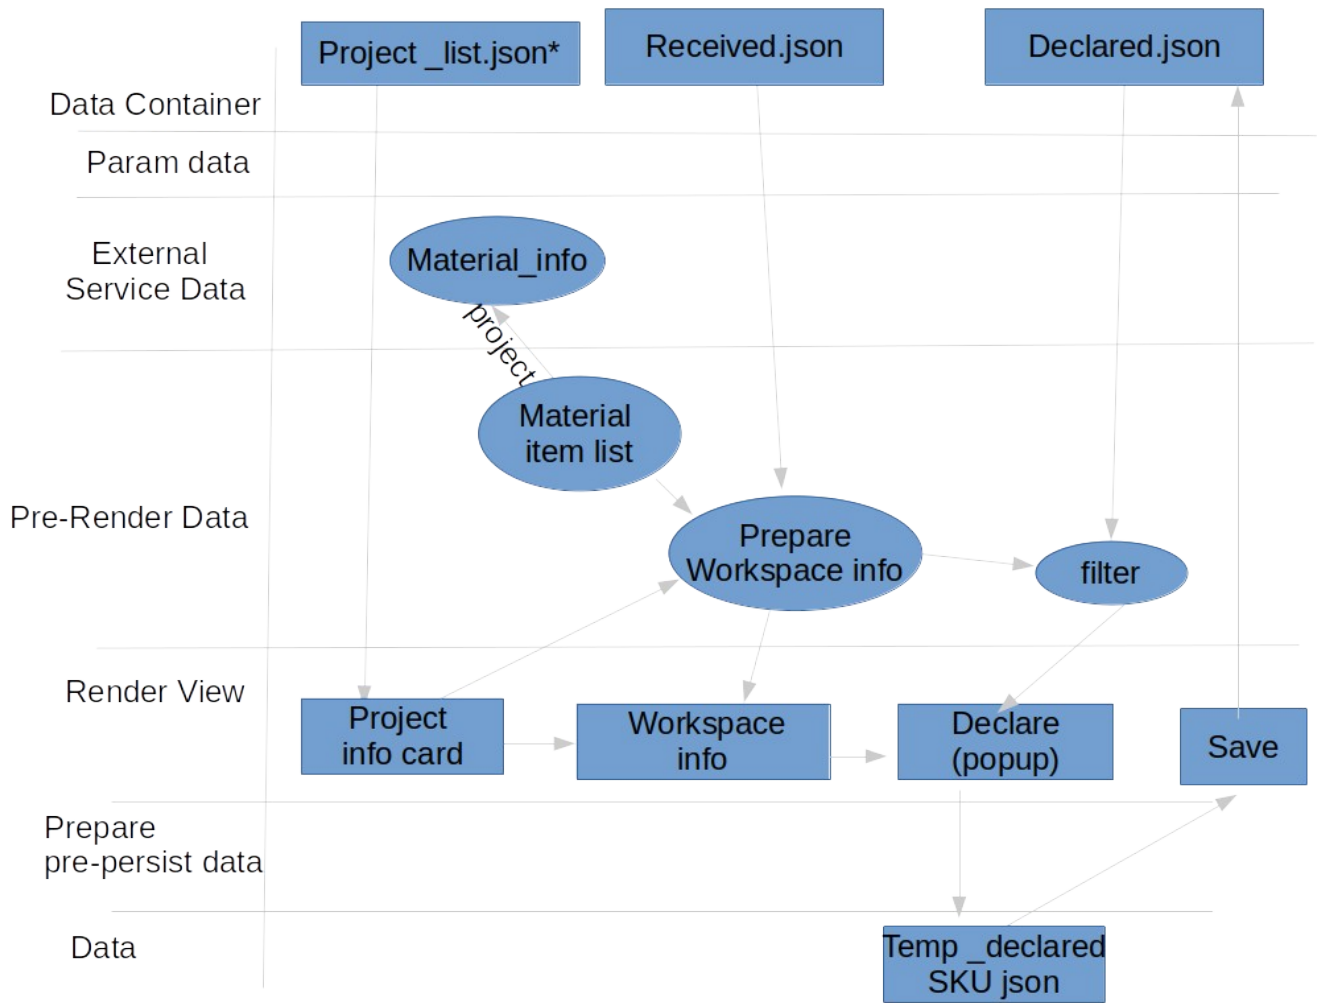

## 2.2 Expression Table

SN	Title	Content
1.	External Dependencies	Get received info from received json, material list for specific project
2.	Business Constraints	
3.	Technical Constraints	
4.	Functions	SKU exp to SKU item, quantity
5.	Findings	
6.	Unexplored Issue	
7.	Deliverable	Declared SKU

## 2.3 Data Structure

```
{
  "data": [
    {
      "TECHDISER_ID": "order1project1",
      "project": "project-1",
      "projectId": "project1",
      "poId": "order1",
      "styleNo": "SN02",
      "projectCompletionDate": "2020-10-10",
      "sentToGstockDate": "2020-10-11",
      "materials": [
        {
          "TECHDISER_ID": "order1project1febricfebricllotlcolorlsizel",
          "matCategoryID": "febric",
          "matCategory": "febric",
          "matTypeID": "febric1",
          "matType": "febric 1",
          "lotID": "lot1",
          "lot": "lot-1",
          "colorID": "color1",
          "color": "Red",
          "sizeID": "sizel",
          "size": "48 inch",
          "materialDescription": "Silk",
          "SKUprefix": "SKU",
          "SKUnumber": "20,25-38",
          "quantity": "750",
          "storeKeepingDate": "2020-09-12",
          "lifeTime": "20245",
          "received": "1-15",
          "declared": [
            {
              "TECHDISER_ID": "order1project1febricfebricllotlcolorlsizelboxSize1",
              "SKUprefix": "SKU",
              "boxSizeID": "boxSize1",
              "boxSize": "3X3X3",
              "g-SKUnumber": "10-15,18",
              "quantity/SKU": "20"
            },
            {
              "TECHDISER_ID": "order1project1febricfebricllotlcolorlsizelboxSize2",
              "SKUprefix": "SKU",
              "boxSizeID": "boxSize2",
              "boxSize": "3X5X4",
              "g-SKUnumber": "10-15,18",
              "quantity/SKU": "20"
            }
          ]
        }
      ]
    }
  ]
}
```

## 2.4 Operation Flow

## 2.5 Technical Workout

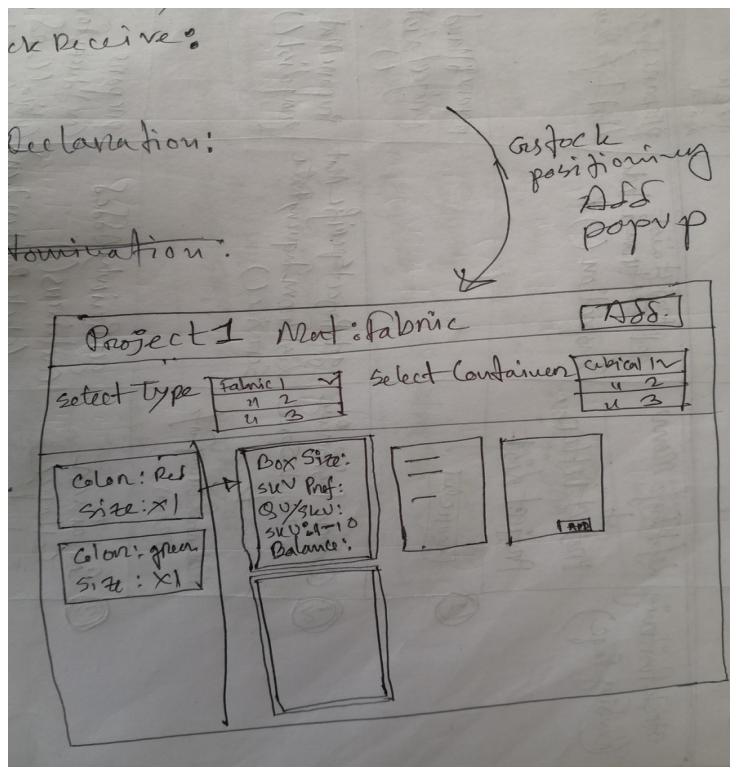

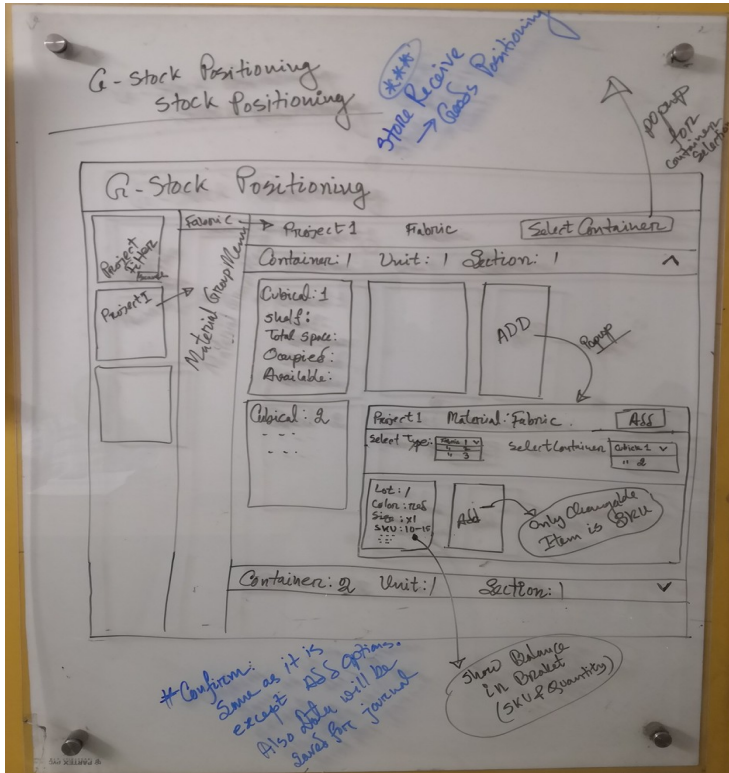

View	Component	Data Fetch	Prepare View Data	Event	Data Save
Stock Declaration	Left Info Menu Project filter project list	Get G stock Project List() G-Stock received json	Prepare Project List Info Menu()	1.Search 2.select project card 5. save	
	1.search		Prepare filtered project list()		
	2. Stock declare workspace for specific project	Get project specific material list from Inquiry data service	Prepare material type for tab view()	3.select tab	
	3. Material wise lot view card (declared vs receive) 5. save	Filter for specific material	Prepare material wise lot info()	4.declare	
			Prepare declare json save data()		G-Stock declare
4. declare popup	Color Size wise Parent card Declared stock child card(Box Size)	Get previously declared stock from declared json	Prepare specific lot view()	6.add	*Temporary data preserve

## Section 3 – Stock Positioning

### 3.1 UI Flow

#### 3.1.1 Stock Positioning UI flow

### **3.1.2 UI Routing Component**

1. Info Menu – project list, material info, colorsize wise info menu
2. popup- select containers, stock position

### **3.1.3 Workspace Component**

1. card- project filter, project list, cubicle, positioned stock, box size wise parent card  
positioned child card
2. header- project info
3. collapse- container list

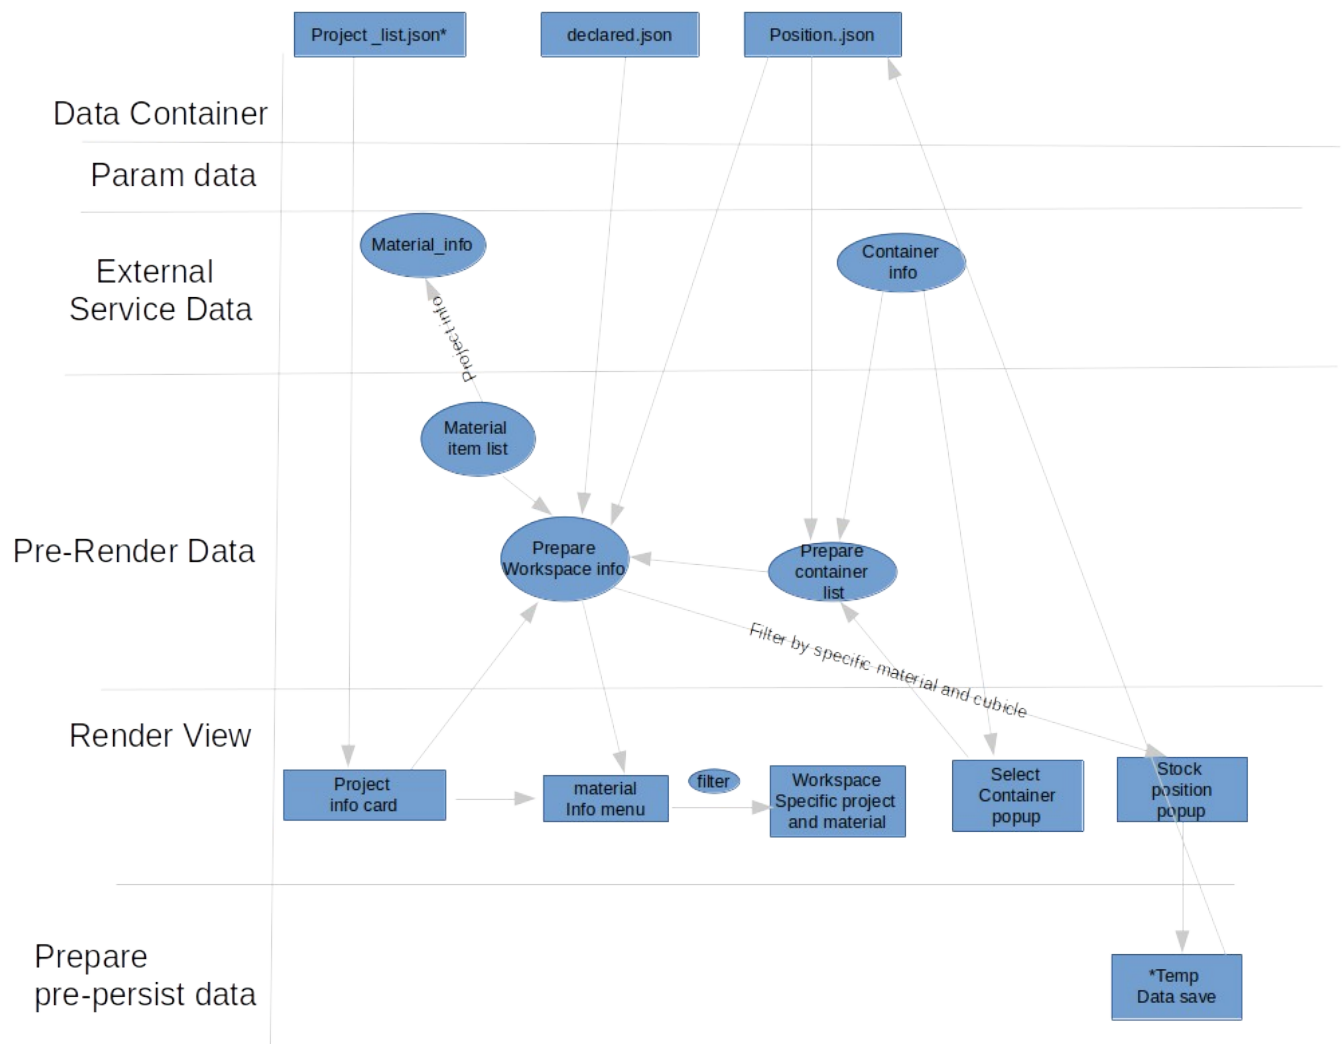

### 3.2 Expression Table

SN	Title	Content
1.	External Dependencies	Get declared info from declared json, material list for specific project
2.	Business Constraints	
3.	Technical Constraints	
4.	Functions	SKU exp to SKU item
5.	Findings	
6.	Unexplored Issue	Container service , stock positioning in container, data save and view from container service
7.	Deliverable	Position stock

### 3.3 Data Structure

```
{
  "data": [
    {
      "TECHDISER_ID": "order1project1",
      "project": "project-1",
      "projectId": "project1",
      "poId": "order1",
      "styleNo": "SN02",
      "projectCompletionDate": "2020-10-10",
      "sentToGstockDate": "2020-10-11",
      "materials": [
        {
          "TECHDISER_ID": "order1project1febricfebricllotlcolorlsizel",
          "matCategoryID": "febric",
          "matCategory": "febric",
          "matTypeID": "febric1",
          "matType": "febric 1",
          "lotID": "lot1",
          "lot": "lot-1",
          "colorID": "color1",
          "color": "Red",
          "sizeID": "sizel",
          "size": "48 inch",
          "materialDescription": "Silk",
          "SKUprefix": "SKU",
          "SKUnumber": "20,25-38",
          "quantity": "750",
          "storeKeepingDate": "2020-09-12",
          "lifeTime": "20245",
          "received": "1-15",
          "declared": [
            {
              "TECHDISER_ID": "order1project1febricfebricllotlcolorlsizelboxSize1",
              "SKUprefix": "SKU",
              "boxSizeID": "boxSize1",
              "boxSize": "3X3X3",
              "g-SKUnumber": "10-15,18",
              "quantity/SKU": "20",
              "positioning": [
                {
                  "containerID": "container1",
                  "positionedSKUs": "1-5"
                },
                {
                  "containerID": "container1",
                  "positionedSKUs": "6-10"
                }
              ]
            },
            {
              "TECHDISER_ID": "order1project1febricfebricllotlcolorlsizelboxSize2",
              "SKUprefix": "SKU",
              "boxSizeID": "boxSize2",
              "boxSize": "3X5X4",
              "g-SKUnumber": "10-15,18",
              "quantity/SKU": "20"
            }
          ]
        }
      ]
    }
  ]
}
```

### 3.4 Operation Flow

### 3.5 Technical Workout

View	Component	Data Fetch	Prepare View Data	Event	Data Save
Stock Receive (Landing Page)	Left Info Menu Project filter project list	GetGstock ProjectList() from G-stock inspection*	PrepareProjectList InfoMenu()	1.Search 2.select project card 9. save	
	1.search		Prepare filtered project list()		
	2.Stock position workspace for specific project Material group Info menu	Get project specific material list from Inquiry data service	Prepare material type for info menu()	3.select Mat type	
	3. container collapsible list  Cubicle card occupied item card	GetPreviously addedSKU in container()	Prepare containers() cubicle info and occupied info	4. select container 5. ADD	
	4. Select container popup	Collapsible unit,section and containers	Get container def from container service	Prepare container list	ok  *added as collapse in workspace
5. Stock positioning popup	Material and cubicle dropdown	Get cubicle and material types *inspection.json	prepareMatContai nerList	6.Select mat and container 7.add → temporary data save	
	6. colorSize wise infoMenu	Get color size wise specific Material *inspection json	PrepareInfo Menu	7. select color&size	
	7.BoxSize wise inspected stock card 8.Stock positioning child card	Get box size wise specific material inspection .json  getPreviously positioned stock position.json	Prepare stock positioning view data	Add  generate a new positioning child card	
	9. save		Prepare position json save data		G-stock position.json

Schedule

SN	Sub-Goals	Week 1	Week 2	Week 3
1.	Stock receive (5 days)	√		
2.	SKU declare (4 days)		√	
3.	Stock position (7 days)		√	√
